

OZEX Lightpaper

(English)

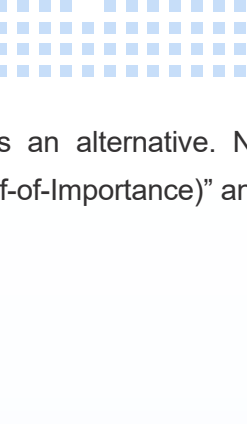

1 Blockchain

1.1 Techniques and features of Block Chain

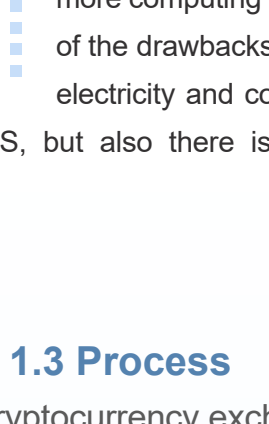

Block Chain is inevitable to mention when people talk about Bitcoin. What is believed is that Block chain leads the change world widely by quickly penetrating all the societies. the most advantageous part of the block chain is transparency, and the credibility based on this technique will be the key part for the 4th industrial revolution. Not only transparency, but also unchangeability in terms of the impossibility of changing records of the financial transactions and dispersibility, in which all the participants take part, will be the most advantaged in Blockchain.

Blockchain can be categorised into 3 following:

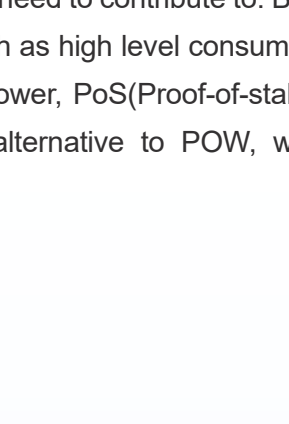

Public Blockchain

Anyone can participate in the network such as Bitcoin and Ethereum.

Private Blockchain

One institution exclusively owns one network.

Consortium Blockchain

Pre-selected group of participants establish a consortium and control the consensus process, but only those authorised participants can take part in the network. So it is called part public, part private.

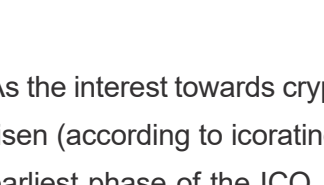

1.2 Blockchain and coins

The coin, what is called 'virtual currencies', will be a familiar name for those who do not have any knowledge of 'Blockchain'. It can be said that the virtual currencies are the rewards for the participants in the network and it is called 'Mining'. the harder the level of mining becomes, the more computing power you need to contribute to. Because of the drawbacks POW such as high level consumption of electricity and computing power, PoS(Proof-of-stake) has derived as an alternative. Not only PoS, but also there is another alternative to POW, which is "POI(Proof-of-Importance)" and so forth.

1.3 Process

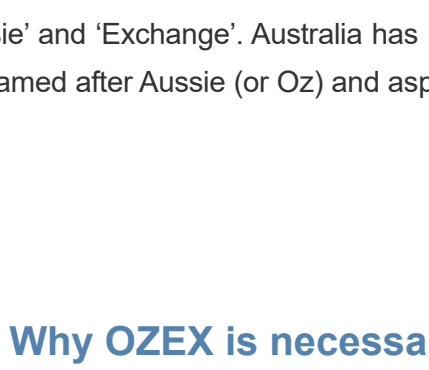

1.3.1 Cryptocurrency exchange

To prevent the risk of fraud and to facilitate various coin trading, exchanges were created. Because, exchange is responsible for implementation of payment, the credit histories of the other party is unnecessary. This plays a significant role in raising the investment convenience for investors. The total number of exchanges registered in 'Coinmarketcap' is 198, and the representative coin exchange as following as.

2 OZEX

2.1 What is OZEX?

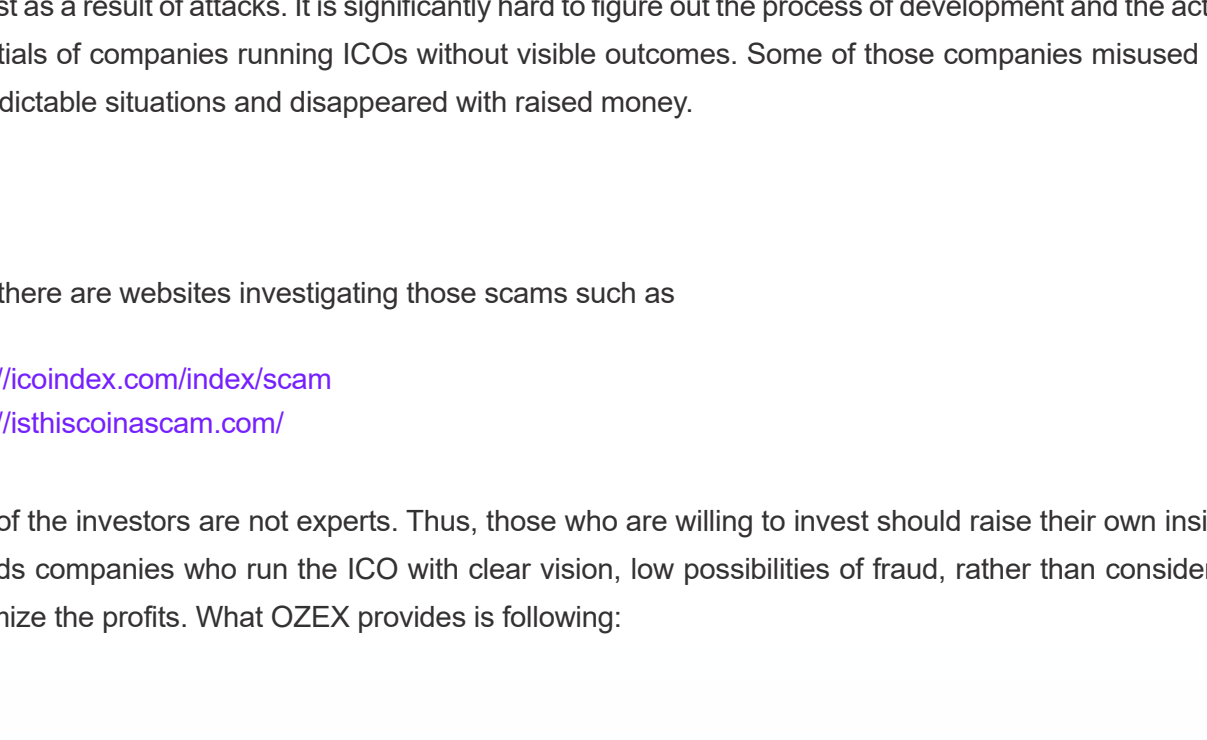

It is a new compound word of 'Aussie' and 'Exchange'. Australia has Uluru regarded to as the centre of the world and given that, OZEX is named after Aussie (or Oz) and aspires to be the world central coin in the cryptocurrency market.

2.2 Why OZEX is necessary?

As the interest towards cryptocurrency has been increased since 2017, the number of ICO coins has also risen (according to icorating.com, there are 92 ICO coins registered from 2017 to February 2018). In the earliest phase of the ICO, once new coins were listed on the exchanges, the value of those coins was soared up to hundreds of thousands of margins in comparison with their initial value, which apparently attracted more investors exponentially.

Token Sale Fundraising

However the problem of the ICO has been exposed, as more investors got into the exchanges. According to the article "initial coin offerings" which Ernst & Young has produced, more than 10% of ICO proceeds are lost as a result of attacks. It is significantly hard to figure out the process of development and the actual potentials of companies running ICOs without visible outcomes. Some of those companies misused the unpredictable situations and disappeared with raised money.

Thus there are websites investigating those scams such as

<https://coindex.com/index/scam>
<https://isthiscoinascam.com/>

Most of the investors are not experts. Thus, those who are willing to invest should raise their own insight towards companies who run the ICO with clear vision, low possibilities of fraud, rather than consider to maximize the profits. What OZEX provides is following:

The convenience
for ICO investment

OZEX has a variety of experts who have experienced through all the process from the mining to the trading for many years. OZEX offers you to participate in the ICO with selective coins if you hold OZEX tokens and those coins/tokens and ICOs will be assessed and validate by experts with professional insights.

stability
for ICO investment

the proven knowhow and consultant delivered by cryptocurrency experts, OZEX evaluates the credibility of the companies and their financial and technical visions.

Profitability
for ICO investment

it is general that the price of coins and tokens are increased comparing to the initial price once the coins/tokens are listed on the ICO exchanges.

3 Blueprint of OZEX

3.1 The structure of OZEX

3.1.1 ICO Coin selection

OZEX team provides a variety range of investment opportunities to the OZEX token holders by continuously selecting the competitive coins (Tokens). Also, the team will evaluate and validate the feasibility of the coins/tokens' profit model, developers of the coins and their viability.

3.1.2 Participating ICO via OZEX

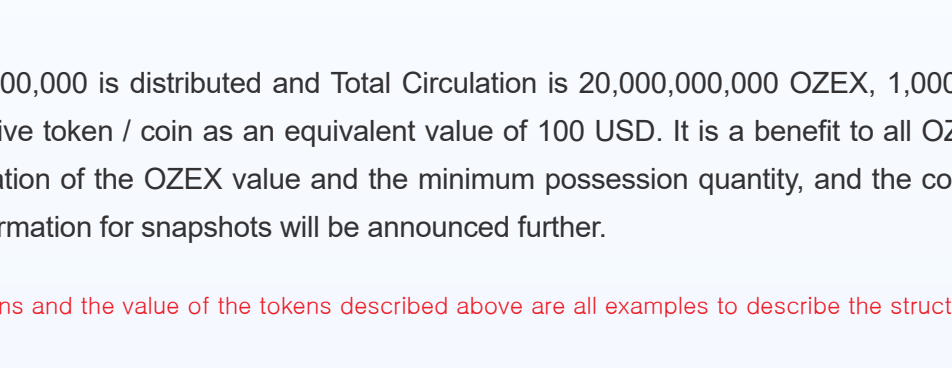

Once you have OZEX tokens in ERC-20 wallet, you are automatically qualified to participate in the range of ICO that OZEX team introduces. New coins will be distributed a hundredth against the value of OZEX token.

3.1.3 Smart Contract

Smart contract will be automatically distributed to OZEX as well as all the benefits will be transparently given through smart contract.

3.2 Token distribution

The distribution of OZEX token via OZEX ICO will be following:
 If you have 10 million of OZEX coins in your OZEX wallet, you are qualified to obtain a hundredth worth new coins/tokens, which OZEX testifies and validates against the value of OZEX token you have for 3 years. For instance, if you have 10,000 USD worth OZEX coins, you are allocated to have 100 USD new ICO coins which OZEX testifies and validates.

(Note, the price of ICO coins and OZEX coins will be set by the day of the cryptocurrency exchange rate according to COINMARKETCAP, and the standard price of ICO coins/tokens will their prices of the next day of ICO. Coins/tokens will be distributed as each ICO roadmap indicates)

3.3 OZEX Capital Fund Management

The OZEX Capital Fund Management is formally described in the white paper for continuous business viability, stability and reliable management of cooperation with partners.

OZEX is scheduled to be listed in August 2018. OZEX is cooperating and will cooperate with multiple external cryptocurrencies startups to help them with their blockchain related engineering and marketing plans, and in returns of helps, OZEX swaps our partners OZEX for their tokens(coins). if our partner has issued their new token in an equivalent value of 0.1 USD, the listed OZEX price is 0.02 USD, and the new tokens to be airdropped are 200 million, OZEX will swap our partner OZEX for 400 million of the new token, as twice as much. See the formula below.

$$\text{OZEX } 0.02 \text{ USD} : \text{New token } 0.1 \text{ USD} = 20 \text{ Million} : 400 \text{ million}$$

Furthermore, the 200 million out of the total amount of 400 million New token, will be airdropped to OZEX holders (minimum 1,000,000 OZEX) and other 200 million will be accumulated with OZEX. The accumulation will be sold 3 months afterward the new token is listed on an exchange, or could be held by OZEX more than 3 months, if it is necessary.

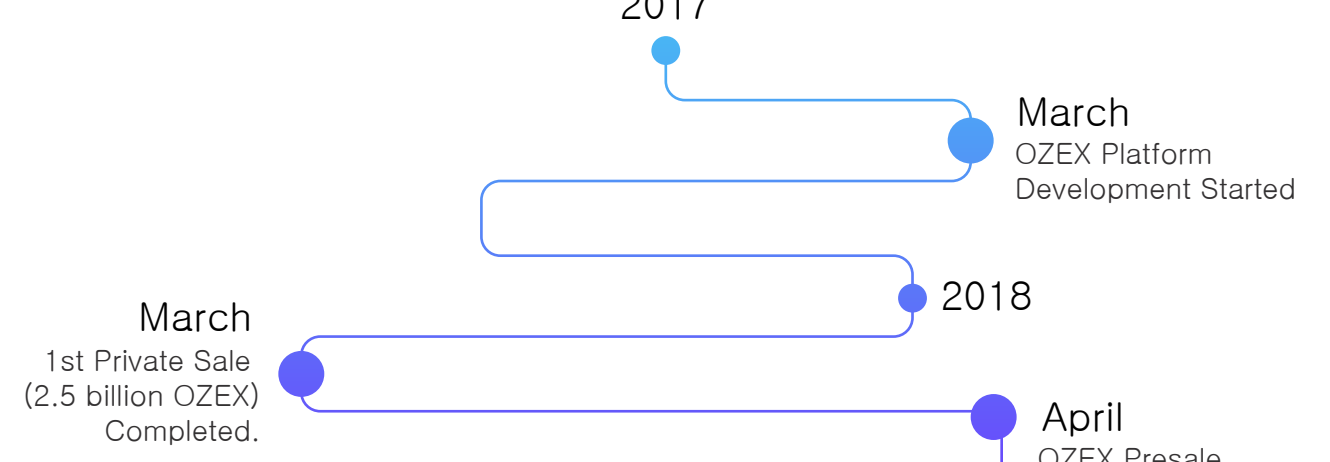

The number of selling new token, is to secure back the number of OZEX which would be an equivalent of 50% ~ 200%, and the 70% of surpluses will be distributed to OZEX holders(No minimum quantities are required). The reason on high difference between 50% and 200% is, if it is fixed, it can be an obstacle to flexible fund management. In addition, if an OZEX holder is to receive less than 0.01ETH, the surpluses will not be distributed.

If a total of \$ 2,000,000 is distributed and Total Circulation is 20,000,000,000 OZEX, 1,000,000 OZEX holders can receive token / coin as an equivalent value of 100 USD. It is a benefit to all OZEX holders without any limitation of the OZEX value and the minimum possession quantity, and the corresponding Block Height information for snapshots will be announced further.

The number of tokens and the value of the tokens described above are all examples to describe the structural parts.

The plan will keep OZEX competitive and sustain, also will boost the business continuity and scalability. If OZEX's total circulation is high, OZEX will be able to tune in a certain amount of OZEX coin, although it will be a very mere amount. Of course, due to the characteristic of decentralization, OZEX, an ERC-20 Token, can not be issued beyond HARDCAP, but it is surely estimated that if the total circulation is going high, the price of OZEX has already increased significantly.

4 Competitiveness

End of 2019

30 tokens will be selected

End of 2020

50 tokens and will establish its own OZEX Alliance.

30 tokens will be selected by OZEX team and experts with regards to the roadmap and the number will increase to 50 tokens and will establish its own OZEX Alliance. The team is developing the secure and convenient way of exchanges considering the purpose of use and tastes for the investors and will ally with secure and robust coins to produce a large scale of alliance. OZEX is already guaranteed to be listed on 2 Chinese based exchanges unlike any other unguaranteed ICO coins, and we aim to list OZEX on big exchanges by November 2018.

5 Road Map

5.1 Project Roadmap

2017

March
OZEX Platform Development Started

2018

March
1st Private Sale (2.5 billion OZEX) Completed.

April

OZEX Presale

June

OZEX ICO Start

June~August

OZEX will be listed on 2 exchanges.

September

Complete MainNet Test

October

Distribute OZEX Personal Wallets

November

OZEX will be listed on big exchanges.

2018~2019

30 new ICOs with OZEX

2020

December
50 new ICOs with OZEX

5.2 ICO Road map

2018

6th May

Presale End

19th Apr

Presale Start (Presale Price : 1OZEX = US\$0.004)

20th June

ICO Start (ICO Price : 1OZEX = US\$0.01)

28th Aug

ICO End
